

Animals

Whales

Whales are intelligent mammals. They live in the sea. Whales breathe the air just like humans. Whales breathe through a blowhole on the top of their head. The Blue Whale is the biggest animal in the world. Blue whales can even sing!

Eagles

Eagles are large birds. Eagles build their nests on high cliffs or tall trees. Eagles have wings, feathers, large beaks and sharp claws. Eagles can see really far. They eat other animals like smaller birds.

VIPERS QUESTIONS

R

What do whales breathe through?

V

What word tells you that whales are clever?

Biggest

Sing

Intelligent

R

Where do Eagles build their nest?

Snakes

Snakes are reptiles. They have cold blood. Some snakes are poisonous, some snakes are not. All snakes eat other animals. Snakes can open their mouth wide so they can eat really big animals like dogs or deer.

Frogs

Frogs are amphibians. They can live on land or in water. Frogs lay eggs in water. The eggs hatch into tadpoles and then tadpoles grow into frogs.

VIPERS QUESTIONS

S

Why do snakes open their mouth wide?

R

Where do frogs lay eggs?

In trees

In water

On land

Sharks

Sharks live in the sea. They eat other fish. Sharks have really good eyesight.

Sharks can be big or small. The dwarf shark is smaller than a ruler. The whale shark is bigger than a bus!

Spiders

Spiders have eight legs. They spin webs to catch and eat flies. Most spiders have eight eyes. Some big spiders can eat bigger animals such as mice and birds. Most big spiders live in Australia.

VIPERS QUESTIONS

I

Why can sharks see really far?

R

How do spiders catch flies?

Answers:

R: A blowhole (on the top of their head)

V: Intelligent

R: On high cliffs / tall trees

S: To eat really big animals

R: In water

I: They have really good eyesight

R: They spin webs
